

Because of the overwhelming response from distributors and customers to try our Soda Nozzle Defender, we have decided to make a small 4 oz. sample jar. This response is due to all of the issues going on with soda machines and the bacteria (germs) growing on the nozzles & diffusers over the last decade. Every restaurant should be using this safe and easy-to-use dissolving powder formula. It is a very inexpensive way to keep the customers from getting sick from nasty nozzles.

### Key Reasons for Using Soda Nozzle Defender

- Cleans and eliminates bacteria while nozzle parts are soaking.
- No more scrubbing nozzle and diffuser parts when using this formula.
- Easy and safe-to-use dissolving action formula in a powder form.
- Easy maintenance program will reduce employee labor cost.
- Our Soda Nozzle Defender cleaner is more efficient than any detergents, soda water, harsh bleaches, hot water and lime juice.
- Guaranteed not to crack, deteriorate or harm your nozzle parts.

**SODA NOZZLE DEFENDER** also removes hardened syrups, sugars, fecal matter and mold!
