

DrainMaintainer™

Advanced Floor Drain Conditioning Basket System

PRODUCT INFORMATION

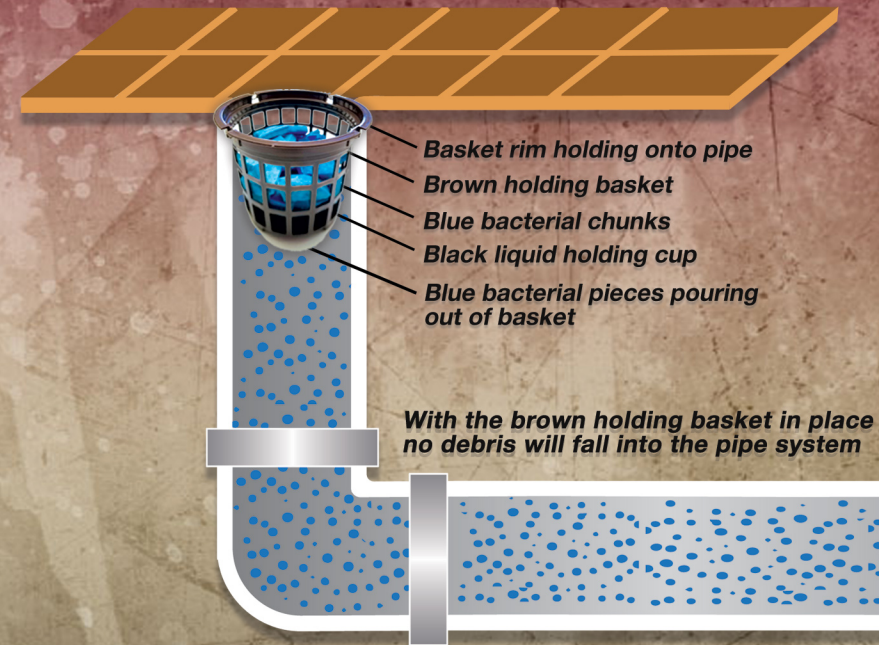

Our Drain Maintainer Basket system contains slow-releasing liquid-activated bacterial chunks that will break down all fats, oils, grease and scum that clog your drain pipes. It will also help liquify everything flowing into the grease trap. The basket will also help stop debris from falling into the pipe that can cause clogging problems.

HOW IT WORKS

- 1) When floor is washed or water is poured into drain, the liquid flows through all the bacterial chunks and fills the black liquid holding cup in bottom of basket, making the bacterial chunks soft.
- 2) The bacterial chunks now turn into pieces. They will start to flow out of the black holding cup into the drain pipe, continuously multiplying, eating away at everything in their path until the F.O.G and scum are gone.
- 3) No Maintenance is required and will last about 30 days.

Comes Individually Wrapped with Precautions & Directions
